### Did You Know?

Thermal cauteries can help improve procedures. Compared to electro-cautery, use of thermal cautery has been shown to reduce the incidence of sperm granuloma and vasitis nodosa post-vasectomy by as much as 50%. [Urology (40:468, 1992)]

# Surgical Clips

## Clips and Applicators for Vasal Occlusion

- VE-6 Medium Clip Applicators  
American-made, Stainless Steel, 6", Curved Head, for use with VE-6-25.
- VE-6-25 Medium Surgical Clips  
Box of 250 titanium clips on 10 25- clip cartridges.

Advanced Meditech International offers medium titanium ligating clips and medium ligating clip applicators for those practitioners who occlude the vas and perform fascial interposition with clips during vasectomy.

Our clips are designed to encircle vessels fully and to close securely. Titanium is better than steel: our titanium clips show up as a thin white line on MRI scans, unlike the "sunbursts" produced by others' stainless steel clips.

### Did You Know?

More and more physicians rely on multiple occlusion methods during vasectomy. The reasons for this trend are unclear, but concerns over liability in case of failure have probably played a role.
